

Moto-Seal Low Emission Forklift Connector

Replaceable Tip Seal

ME220FSN
Patent Pending

 US Listed
For LP Gas

Purpose: To provide a minimum loss connection between the carburetion fuel line and the service valve on motor fuel type applications. This new design places an additional replaceable sealing tip at the nose of the connector allowing the valve to make a bottom face seal when coupled with any mating motor fuel cylinder valve connector. This new connector works in conjunction with all existing male connector designs (O-ring and flat gasket) to create three layers of security against possible leaks or connection failure.

Features:

- Replaceable tip seal
- Creates a positive seal every time with less than .3 CC product loss at disconnect
- Works in conjunction with all mating male forklift connectors
- Same durable riveted valve stem, seat configuration, chrome plated body, and convenient installation wrench flats as our standard female forklift connector (ME220F)
-  listed for use with LP Gas
