

Lift Truck Check Connectors

ME220F

ME220M

ME220M & ME220F

These quick closing couplings are designed to join the carburetion fuel line to the service valve on motor fuel type applications. The ACME threads allow for quick and repeated removal and hookup without loss of product.

The ME220M connects directly to the service valve outlet, while the ME220F connects to the motor fuel line. Both couplings have an internal safety check assembly that opens when the two are hooked together. Spring force and pressure close both checks.

Marshall Excelsior's ME220M is designed to be refilled by any refill adaptor on the market regardless of the manufacturer. Including REGO'S™ model 7193K-10B lever operated refill adapter.

Lift Truck Check Connectors			
Part No.	Inlet Connection	Outlet Connection	Application
ME220M	3/8" FNPT	1 1/4" M Acme	Service Valve
ME220F	1 1/4" F Acme	1/4" FNPT	Fuel Line
ME220FP	1 1/4" Female Acme Cap for ME220M
