

Engine Fuel Remote Fill Valve

ME602-8

Application:

Specifically designed for remote filling applications where a standard tank type filler valve is not practical. Perfectly suited for motor fuel applications or other hard to reach tank applications. This single check fill valve is designed to provide maximum product fill rates along with an automatic shutoff once product flow ceases.

Features:

- Maximum product flow rate
- Resilient bonded main valve seal
- Integral break away feature leaves check valve intact in the event of a vehicle roll away
- Rear bulkhead mounting with quarter panel jam nut and lock washer
- Single piece main valve body for maximum strength
