

# TURBO-FLO LE

## ME807 Series Dry Break Transfer Valve

Specifically designed to reduce product emissions on transport trailer, bobtail and bulk plant transfer points to less than 4cc at disconnect. The valve features positive shut off while being capable of flowing bi-directionally for both loading and unloading applications. Additional features include a pilot equalizing port for pressure equalization and ease of operation. The design also features an (IBC) Integrated Back Check feature to allow trapped liquid to be forced back up stream further reducing trapped product for increased safety and reliability.
