

FLOW INDICATING SWING CHECK VALVE

ME981-10
Indicating Check Valve

ME982-10
Non-Indicating Valve

ME982-24-4F
Non-Indicating
Flanged Valve

DESCRIPTION

Promotes maximum pump efficiency by allowing system operators a visual inspection point for monitoring liquid flow conditions as well as providing a soft seat back check valve to prevent reverse product flow. Installation of a flow indicating swing check valve upstream of the pump, allows the operator to observe product flow and make pump adjustments for maximum flow without cavitation. Suitable for stationary and mobile applications.

FEATURES

- Powder coated ductile iron body for maximum durability
- Removable flanged ends for ease of field service
- Integral swing away check valve with soft seat to promote maximum product flow and prevent reverse product flow
- All stainless steel internal component construction provides maximum corrosion resistance
- Magnetically coupled flow indicator for maximum protection against leaks and minimal resistance to product flow
- Clear/Easy to read flow indicator with "Glow" arrow allows the operator to easily see if the valve is open or closed
- Indicator dial removable under full system pressure
-  LISTED for use with LP Gas and Anhydrous Ammonia - 400 PSI WOG
