

EXCELA-FLO Regulator Demonstration Kit

APPLICATION:

Intended for use as an educational tool for visual representation of direct operated regulator functions and features. This kit includes a clear polymer model of the Excelsior Flo integral compact twin stage regulator that is fully functional allowing basic regulator adjustment, lock up, flow, pressure test and relief valve operation. The clear polymer body/bonnet allows observers to visually witness the operating components of the regulator under these conditions. This is the ideal tool to provide hands on training anywhere that compressed air is available.

WARNING: This regulator is intended for demonstrational purposes only. Only operate using compressed air. Do not use this regulator with LPG or any other flammable or dangerous gases.

FEATURES:

- Clear polymer body/bonnet for clear visual indication of inner components
- 100% operational for pressures up to 120 PSIG
- Supplied with convenient standard air quick disconnect couplers
- Includes all necessary components and accessories to demonstrate regulator operations
- Heavy duty foam insert and lockable carrying case for safe transport and storage
